TerraSim, Inc. and Antycip Simulation Partner in Offering Advanced Technology Terrain Generation Tools

Paris, 15 November 2007. TerraSim, Inc. and Antycip Simulation announce the signature of a strategic partnership for the exclusive distribution of TerraTools® and other TerraSim geospatial data processing tools in Europe.

Founded in 1996 by four members of the Digital Mapping Laboratory within the Computer Science Department at Carnegie Mellon University, TerraSim's founders have a combined 70+ years of experience in simulation database construction, photogrammetry, image understanding, and cartographic feature extraction. Today, TerraSim products are used worldwide for the rapid processing of geospatial data into efficient 3D visualizations for applications where complex source data content and accuracy must be preserved and portrayed. TerraSim products are used in diverse markets including defense modeling and simulation, intelligence site modeling, and commercial urban visualization.

"We are very excited about Antycip Simulation's unique ability to represent us in product and services sales in these markets across Europe," said Dave McKeown, President of TerraSim.

Antycip Simulation is leading the European COTS tools market with over 10 years experience in the modeling and simulation market in Europe. "Antycip Simulation has brought to light multiple innovative technologies across the years in Europe; we believe that TerraSim will offer our customers a top terrain technology for their applications and future successes", says Michel Pronier, Managing Director of Antycip. "Antycip constantly improves its offer in term of provision of integrated solutions and European support; TerraSim solutions will bring to European COTS tools users innovative solutions in terms of urban terrain simulations capabilities; Antycip will provide technical support on TerraSim tools as well as professional services", he continues.

With Antycip Simulation European coverage, TerraSim will benefit from Antycip European offices in Paris, Oxford, Milan, Barcelona, Cologne and Gothenburg where the company provides technical and sales support. Much more than a normal reseller, Antycip expertise in simulation and training is widely recognised by the industry. "Antycip Simulation is very proud to sign this agreement and represent TerraSim in Europe; we always select what is best for our customers", says Gael Ramaen, Antycip European Marketing Development Manager.

TerraSim tools compliment Antycip's existing offering in COTS simulation software products. For example, the TerraTools GDB Export option supports the export of MÄK GDB format databases for MÄK VR-Forces. Using TerraTools Core, users can develop urban environments with building interiors and underground structures for use in MÄK B-HAVE and in the Kynogon behaviors runtime. In addition, Antycip Simulation provides BlueBerry3D and Harris ImageLinks® data, as well as RealNat Premium which offers a library of high detailed vegetation.

TerraSim will showcase its capabilities at I/ITSEC 2007 in Orlando, Florida, Booth 1227. New features include updated multi-core processing for parallel execution of TerraTools, automatic parametric generation of urban details for improved visuals, enhanced generation of building interiors and exterior facades, and support for MÄK VR-Forces and B-HAVE database generation.

About Antycip

Incorporated in 1997, Antycip Simulation is today recognised as the expert in the delivery of market leading simulation software, hardware and solutions.

With over 10 years of presence in the training and simulation market, Antycip has regional offices with commercial and technical support in France, the United Kingdom, Germany, Sweden, Italy and Spain.

Antycip's core competencies include:

- Commercial-Off-The-Shelf (COTS) based real-time 3D development software toolkits
- Integrated and immersive projection and display solutions
- Consultancy services and customised solutions
- Proof of concept, training & project management

Antycip Simulation product portfolio combined with over 10 years of experience in Visual Simulation gives Antycip an enviable reputation for providing leading edge simulation solutions, backed-up by a focused support and professional services team.

About TerraSim, Inc.

TerraSim is a U.S. owned high-technology company that provides software solutions and services for advanced visual simulation and database construction using a variety of geospatial source data. TerraTools[®], their primary product, is available for Windows workstations. Using advanced geospatial processing technology combined with multi-core processors, TerraTools supports up to 8 simultaneous processing threads on a single workstation license.

TerraTools is used in the automated construction of dense urban environments for operations planning and situation assessment as well as to produce exercise databases covering hundreds of one degree geocells. TerraSim also provides database construction services and advanced technology development for both civilian and military customers.

TerraSim's TerraTours[®] product supports highly interactive geospatial query using 3D visualizations linked to a variety of collateral source data. Using GISLink[™] technology, TerraTours users can automatically geo-reference and display information sources such as still photography, video streams, CAD design data, maps, and any web-enabled document.

TerraSim[®], TerraTools[®], and TerraTours[®] are U.S. registered trademarks of TerraSim, Inc.
